1	A FRAMEWORK FOR A SMART SOCIALBLOOD DONATION SYSTEM BASEDON MOBILE CLOUD COMPUTING	 Almetwally M. Mostafa Ahmed E Youssef Gamal Alshorbagy 	Blood Donation and Blood Transfusion Services (BTS) are crucial for saving people's lives. Recently, worldwide efforts have been undertaken to utilize social media and smartphone applications to make the blood donation process more convenient, offer additional services, and create communities around blood donation centres. This application helps people receive notifications on urgent blood donation calls, know their eligibility to give blood, search for the nearest blood centre, and reserve a convenient appointment using temporal and/or spatial information. It also helps establish a blood donation community through social networks such as Facebook and Twitter.
2	Plasma Donation Website using MERN stack	Neha SoniSoftwareEngineeringIntern at FICO	The person who wants to donate his/her plasma needs to register in our application providing required information which are name, age, blood

		Technical Blogger	group, phone number, and location, etc. Patients who need plasma can also fill the form to request the plasma. Patients can directly call the donor by taking his/her contact number from the application. The user can also view the total active cases, recovered cases, vaccine centres in their area, hospital location, and helpline number.
3	Instant Plasma Donor Recipient Connector Web Application	 Ripathi S Kumar V Prabhakar A 	The world is suffering from COVID 19 crisis, and we haven't found any vaccine yet. But there is another scientific way from which we can help to lower the death ratio or help the COVID 19 affected person is by donating Plasma from recovered patients. With no approved antiviral treatment plan for the deadly COVID-19 infection, plasma therapy is an experimental approach to treat COVID positive patients and help them recover faster. The therapy considered to be safe and promising. If a particular person is fully recovered from COVID 19 he/she is applicable to donate their plasma. In the proposed system, donors who need to donate plasma can donate by uploading covid-19 certificate and blood bank can view donors and can raise requests to donors and the hospital can register/login and can search for plasma, they can raise requests to blood bank and can get the plasma.
4	Smart Blood Bank as a Service on Cloud	 Bharathwaj Muralidaran Akshay Raut Yogesh Salve Shivshankar Dange Likhesh Kolhe 	We all know the working of blood bank management system. A blood bank is a cache or bank of blood or blood components, gathered as a result of blood donation or collection, stored and preserved for later use in blood transfusion. blood transfusion.In this project our aim is to develop a web application, which will be hosted on cloud and will provide fast and easy access to reports. We are using a concept of cloud computing.

5	Developing a	•	Aishwarya R	A plasma is a liquid portion of the blood,
	plasma donor		Gowri	over 55% of human blood is plasma.
	application using	•	Jain University	Plasma is used to treat various infectious
	Function-as-a-		Department of	diseases and it is one of the oldest
	service in AWS		MCA,	methods known as plasma therapy.
			computer	Plasma therapy is a process where blood
			science	is donated by recovered patients in order
				to establish antibodies that fights the
				infection.
				In this project plasma donor application is
				being developed by using AWS services.
				The services used are AWS Lambda, API
				gateway, DynamoDB, AWS Elastic
				Compute Cloud with the help of these
				AWS services, it eliminates the need of
				configuring the servers and reduces the
				infrastructural costs associated with it
				and helps to achieve serverless
				computing.

			Milind	aim of creating cloud-based blood bank
			Pandagale	system is to make the blood available on
			-	time to the people, even in emergency
				situations. With the help of this project,
				the user can be able to view information
				about every entity related to blood bank
				i.e. hospitals, donors, a location of
				another blood bank etc. The security
				factor is maintained properly.

8	Plasma-Donor- App	 Dheeraj Kotwani Pragathi Verma Sitam Sardar Vatsal Kesarwani Nakul Sharma Nuh Koca Harsh Rajgor 	An Open-Source App which fills the gap between the patients and the Plasma Donors. Helped many persons.
9	Developing a plasma donor application using Function-as-aservice in AWS	• Aishwarya R Gowri	A plasma is a liquid portion of the blood, over 55% of human blood is plasma. Plasma is used to treat various infectious diseases and it is one of the oldest methods known as plasma therapy. Plasma therapy is a process where blood is donated by recovered patients in order to establish antibodies that fights the infection. In this project plasma donor application is being developed by using AWS services
10	Lifesaver E-Blood Donation App Using Cloud	 Rishab Chakrabarti Asha Darade Neha Jadhav Prof. S. M. Chitalkar 	In proposed system the aim is to provide a direct call routing technique using Asterisk hardware. A blood bank database is created by collection of details from various sources like Blood banks, NSS, NGO's, hospitals and through web interface. The central server will be associated with a Toll-free number that can be used to connect to it. From the server the call from the required person is routed to the eligible donor's number. All information about the donors and blood bank is stored on the cloud. As per blood requirement, user can quickly get notification from blood bank within the radius of 5-10km. If requested blood group is available in the blood bank then it will send positive reply message to the users. If requested stock is not available in the blood bank send notification to all donors. If anyone is able to donate then he will reply to blood bank.
